

You might have noticed this notebook feels a little different than other notebooks. Why is that? Well..

You're writing on stems and leaves from plants.

We're not kidding – this notebook is made from plant waste. No wood pulp is used, and far less water was involved in its production process. Plant paper is a new, much more sustainable alternative for old-fashioned paper.

If you want to know what's going on in the paper industry, you can read more on www.paperontherocks.com/newpaper (or scan the QR-code below).

Paper / on the Rocks

At Paper / on the Rocks, we love trees. We're pretty sure they love us too, because duh, we're saving them. Why? Because we don't want your 21st century thoughts to be written on 19th century paper. That's why we make forest-friendly stationery that provide a sustainable home for new stories to be written.

But we don't just make products. We're working towards climate positive paper products. Join our mission, rewrite the rules.
